Professional Summary

PHP Developer with **5+ years of experience** in building and optimizing APIs and backend solutions using Laravel. Specialized in creating reliable systems utilizing REST, Docker, and CI/CD. **Focused on enhancing system stability and accelerating business processes through modern technological practices.**

Work Experience

Napopravku – PHP Developer

January 2023 — Present

- Developed and maintained APIs for mobile applications and administrative panels.
- Modernized legacy codebase and improved system reliability (Pest, PHPUnit)
- Implemented API versioning and enhanced the administrative system for better content management.

Achievements:
- Reduced API response time by 30% through server-side optimization.
- Initiated PHPStan (larastan) integration into the development workflow, improving code quality and preventing defects at early stages.
- Resolved N+1 query issues in legacy code, significantly improving application performance.

Jetmix – Software Engineer

September 2020 — December 2022

- Developed REST APIs using Laravel and Django for internal and external services.
- Built custom CMS solutions and admin panels following JSON API standards.
- Configured and maintained production servers (VPS/VDS)

Achievements:
- Optimized CI/CD processes, reducing feature delivery time by 50%.
- Developed an admin panel for a major client, streamlining content management operations.
- Set up monitoring and logging systems, improving incident response speed in production.

Lyceum – Programming instructor

November 2021 — May 2022

Taught programming fundamentals to 7th-grade students.

Education

Bachelor's Degree (2016 – 2020)
Immanuel Kant Baltic Federal University (Kaliningrad)
Information Systems and Technologies | **Graduated with honors**

Key Skills

Programming Languages: PHP (Laravel, Yii2), GoLang, Node.js, TypeScript
Databases: PostgreSQL, ClickHouse, MySQL, Meilisearch, Sphinx
Technologies: REST API, Redis, RabbitMQ, GraphQL, gRPC, SOAP
Infrastructure: Docker, Docker Swarm, Kubernetes, VPS/VDS configuration, CI/CD (GitLab CI, Jenkins)
Tools: Sentry, PHPStan (larastan), Psalm, Pest, PHPUnit, Grafana, Clockwork, Blackfire
